

## A handbook for the board, the secretariat and the bank

Majlis is where a Shariah board does its work and keeps its record. The bank asks a question. The board answers it against the conditions of a named contract. The answer comes out as a document the bank can file, cite and be audited against.

This handbook covers every screen and every tool. Each section says what you see, what you press, and what happens.

19

contract types, in ten families

89

conditions the board can rule against

6

calculations, none of them a verdict

21. Every address

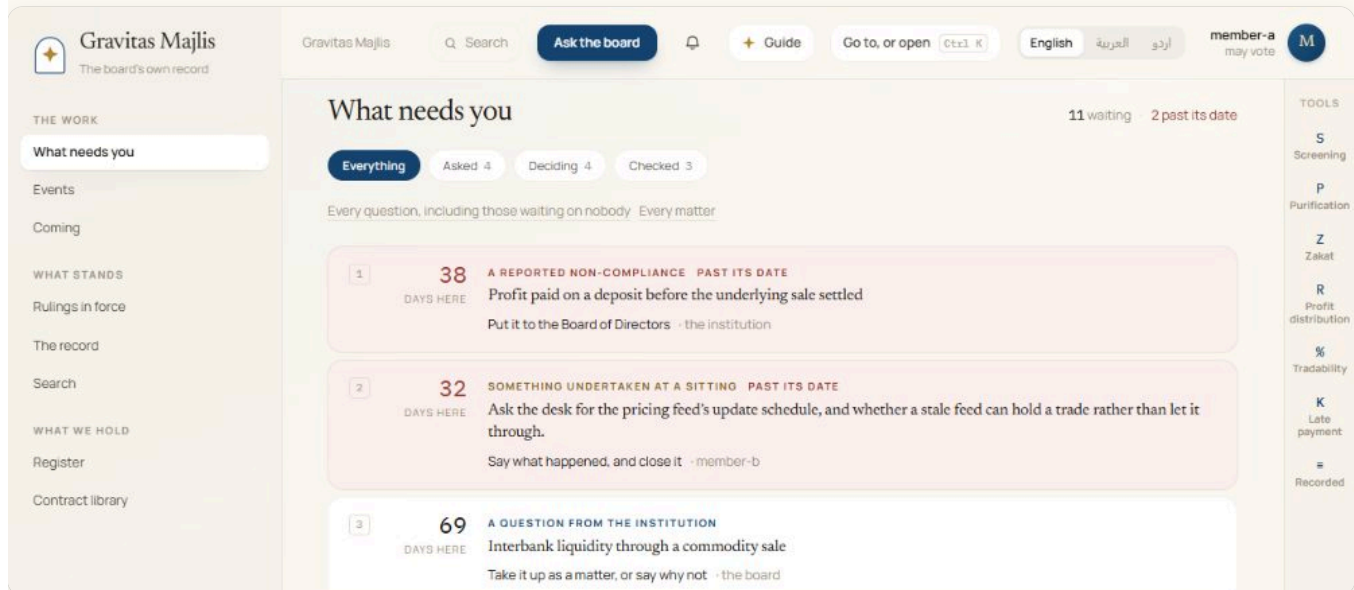

# 1 · How it works, in one page

1. **The bank asks.** Someone at the bank fills in four boxes and attaches the contract.  
The contract is read on the bank's own computer; the file never leaves it.
2. **The board takes it up.** A member turns the question into a matter and writes how the board will put it.
3. **The board picks the contract type.** Murabaha, ijara, sukuk and sixteen others.  
Picking one loads its conditions as the steps of the work.
4. **The board answers each condition.** Met, not met, or does not apply. Every answer needs a reason, and the reason is signed with the member's name.
5. **The board argues and votes.** Each vote carries a reason. A ruling needs the number of votes the board's own rules require.
6. **The bank gets the document.** Every condition, every answer, every reason.  
Conditions marked *not met* come back as clauses the agreement has to add.

The whole path takes about ten minutes to demonstrate and is written out step by step in section 7.

## 2 · The parts of every screen

Once you know these five things, every screen is familiar.

THE BOARD'S HOME SCREEN

### The list on the left

Eight places, in three groups.

GROUP

WHERE IT TAKES YOU

The work

What needs you · Events · Coming

What stands

Rulings · The record · Search

What we hold

The register · The contract library

The bank sees a shorter list of its own. Section 4.

### The bar along the top

Your name, search, the language (English, Arabic, Urdu), and a button that is on every screen: **Ask the board**. The bell next to your name lights up when the record has changed since you last looked.

### The tools down the right

Seven buttons, always in the same place: screening, purification, zakat, profit distribution, tradability, late payment, and the list of everything that has been worked out so far. One press opens the tool over the page you are on. Section 8.

## The bar along the bottom

Four short facts about this installation. They are there so nobody has to guess why a button is missing.

Nothing here signs on the board's behalf · Terms are carried out elsewhere · No assistant is configured · Nobody outside is told

If the bank has connected email, the same bar says *Notices are sent* instead. If it has connected the registry, it says *Terms are read before every transaction*.

## The confirm window

Nothing is saved until you confirm it in a window. The window tells you three things first: what the button does, what it means, and what happens afterwards. If the server refuses, the refusal appears in the same window.

### 3 · Who can do what

There are five kinds of user. A board member can also hold an office: chair or secretary.

|                                              | SIGNATORY               | ADVISORY | LIAISON | OBSERVER | BANK    |
|----------------------------------------------|-------------------------|----------|---------|----------|---------|
| Read the record                              | yes                     | yes      | yes     | yes      | its own |
| Ask a question                               | yes                     | yes      | yes     | —        | yes     |
| Take a question up, answer conditions, argue | yes                     | yes      | yes     | —        | —       |
| <b>Vote</b>                                  | yes                     | —        | —       | —        | —       |
| Record what the bank did                     | —                       | —        | yes     | —        | yes     |
| Keep the minutes                             | chair or secretary only |          |         |          |         |

- **Signatory** — votes. A ruling needs the number of signatories the board's own rules require. On the demonstration board that is three of five.
- **Advisory** — takes part in everything except the vote.
- **Liaison** — the technical member. Can also record things the bank did.
- **Observer** — reads everything, changes nothing.
- **Bank** — the institution's own desk, with its own three screens.

A password tells Majlis who you are. It is not a signature. Signing a ruling with a scholar's own key is a later stage of the product, and the bar at the bottom of every screen says so until it exists.

## 4 · The bank

The bank gets its own application, not the board's with half of it greyed out. Three screens.

The screenshot shows the 'Put a question to the board' interface. On the left is a sidebar with a logo and navigation links: 'Where you stand', '01 I ASKED' (with 'Put a question' selected), '02 BINDS ME' (with 'What binds you', 'What you may deal in', 'Kinds of contract', 'Check a contract'), '03 I OWE' (with 'What is outstanding', 'What you undertook'), and 'BESIDES' (with 'The board'). The main area has the title 'Put a question to the board' and a subtitle 'Your words are kept as you wrote them.' It contains four input boxes: 'One line to find it by', 'What you are asking' (with a note 'Never edited. The board's reading appears beside it.'), 'What the board needs to know', and a partially visible 'What you are waiting to do' box. The top navigation bar includes a search bar, 'Ask the board' button, language selectors (English, العربية, اردو), and a user profile 'desk-treasury asks and is bound'.

THE BANK'S SCREEN

### Asking a question

Four boxes:

| BOX                          | WHAT GOES IN IT                                   |
|------------------------------|---------------------------------------------------|
| One line to find it by       | a short title                                     |
| What you are asking          | the question itself. It is never edited by anyone |
| What the board needs to know | background                                        |
| What you are waiting to do   | what is held up while you wait                    |

Then attach the contract. Press **Choose a file** and pick the PDF. Majlis reads the words out of it on your own computer and shows how many characters it found. The file itself is not uploaded anywhere.

If the PDF is a scan, Majlis says so and will not take it. A scan has no text behind it, so reading it would produce a list saying every condition is missing, which would be wrong.

Press **Put it to the board**, then confirm in the window. The question appears in the list below, marked **WAITING**.

Each question in that list shows where it got to:

- **WAITING** — with the board. You can still withdraw it.

- **TAKEN UP** — the board is working on it. There is nothing to read yet, and the row says SO.
- **DECLINED** — with the board's reason, in full.

When the board has decided, the same row offers **the ruling, written up**. That is the document itself.

## What binds you

Every ruling in force today, written for someone who has to follow it: the condition, the figures, and a link to check a contract against it.

## What you owe

Where the board found that something went wrong: what money is owed, to whom, and which steps are still open.

The screenshot shows the Gravititas Majlis website interface. The header includes the logo, navigation links like 'Gravititas Majlis', 'Search', 'Ask the board', 'Guide', 'Go to, or open', and language options (English, العربية, اردو). A user profile 'member-a may vote' is visible. The left sidebar lists categories: 'THE WORK' (What needs you, Events, Coming), 'WHAT STANDS' (Rulings in force, The record, Search), and 'WHAT WE HOLD' (Register, Contract library). The main content area is titled 'What you still owe' and includes a sub-header '2 found actual in 2026'. Below this, a text block explains the purpose of the section. A section titled 'ON THE CASE' shows a message: 'Nothing has been asked of the desk on this case.' A red box labeled 'STILL OWED' displays '41280.00 AED' and a note about currency recording. The right sidebar lists 'TOOLS' with links: S Screening, P Purification, Z Zakat, R Profit distribution, % Tradability, K Late payment, and = Recorded.

## Check a contract

Attach a draft and see, condition by condition, where the agreement answers it and where it does not, with the passage quoted. Nothing is uploaded here either.

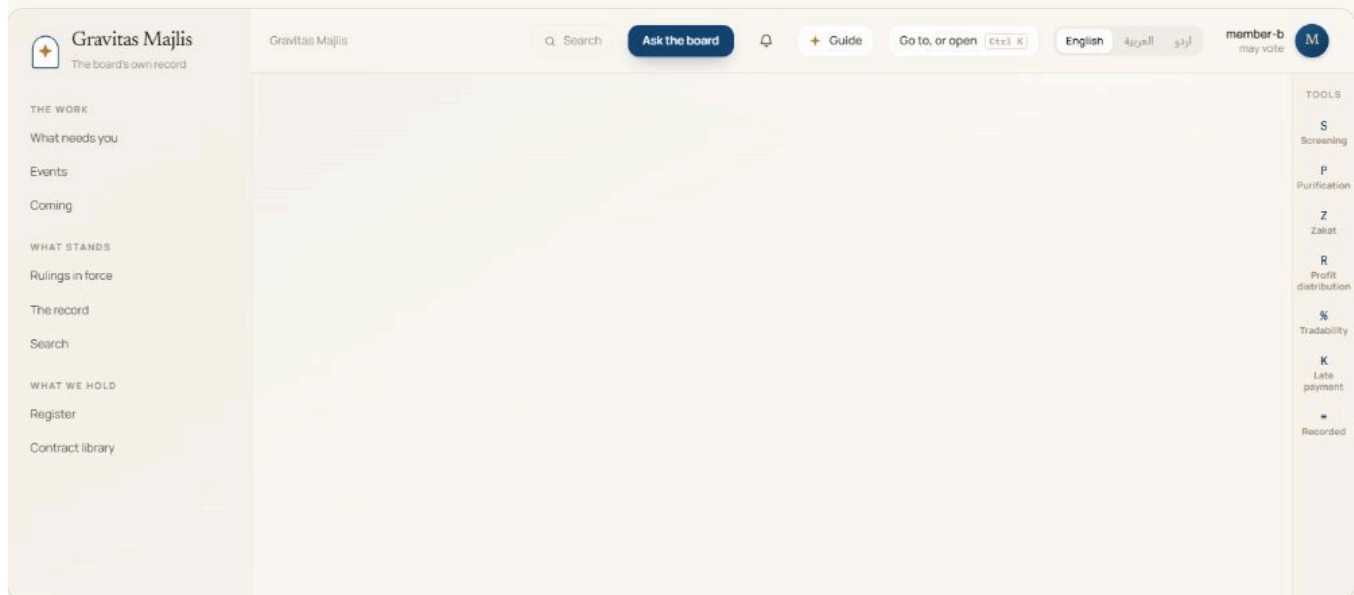

A ruling that has passed the vote but is still in its waiting period does not appear under *What binds you* yet. The document says on its front page when it takes effect.

## 5 · The secretariat

### Taking a question in for someone else

Most questions arrive by email from someone who will never have a login. The secretary types it in using the same form, with one extra box: **who actually asked**. The record shows that it was entered on their behalf.

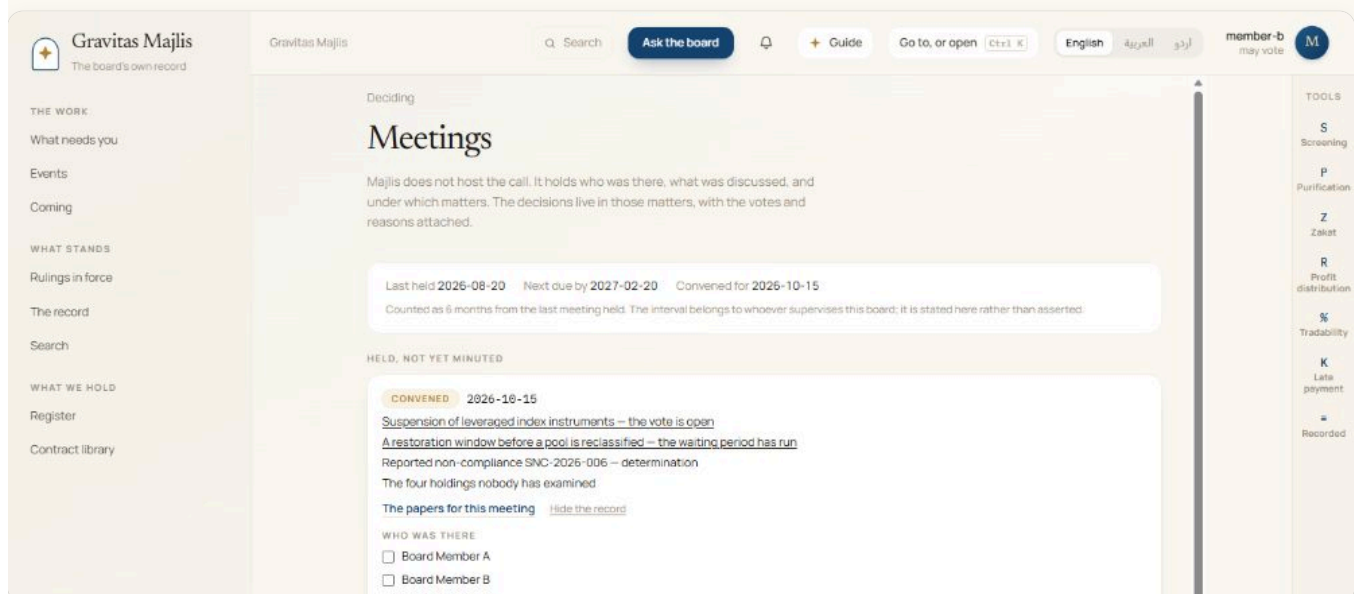

### Sorting the queue

#### THE QUEUE

Oldest first. Two buttons on each question: **Take it up as a matter**, or **Do not take it up**. Declining needs a reason, and that reason is the only thing the bank gets back.

### Calling a sitting

#### SITTINGS

Majlis does not host the call. It keeps the record of it.

- An agenda is required. Without one the button refuses and says why.
- Mark who attended. Quorum is worked out from that.
- **The board book** collects everything for the sitting into one document to send out beforehand.
- The chair or the secretary keeps the minutes.
- Closing the sitting puts the minutes into the record.

## Recording what the bank did

A liaison, or a member holding the secretary's office, can record something the bank did: a plan filed, a payment made, a step delivered. The record shows who entered it and on whose behalf.

## 6 · The board

### What needs you

The screenshot shows the Gravitas Majlis web application. The header includes the logo, navigation links (Gravitas Majlis, Search, Ask the board, Guide, Go to, or open), language options (English, العربية, اردو), and a user profile (member-a may vote, M). The left sidebar lists categories: THE WORK (What needs you, Events, Coming), WHAT STANDS (Rulings in force, The record, Search), and WHAT WE HOLD (Register, Contract library). The main content area is titled 'Questions from the institution' and features a list of questions. The first question is 'Interbank liquidity through a commodity sale', asked on 2026-07-14, with 69 days waiting. The question text is: 'The desk needs an overnight liquidity instrument. May we place surplus through a commodity purchase and immediate onward sale, where the broker is the same party on both legs and the metal is never moved?'. The status is 'WAITING'. A button 'Ask the board' is visible. The right sidebar lists tools: S Screening, P Purification, Z Zakat, R Profit distribution, % Tradability, K Late payment, and = Recorded.

Everything waiting on somebody, in one list. It is worked out fresh from the record every time, so it never shows something you have already done. Each row says how long it has been waiting, what it is, what to do, and whose turn it is. The filters across the top are Everything, Asked, Deciding and Checked, with a count on each.

VERSION 3 THE TERMS MATCH WHAT WAS RECORDED NO REVIEW SCHEDULED

### Tangible asset ratio for secondary trading of mixed pools

AS THE BOARD EXPRESSED IT

Where a tokenised pool combines asset categories, tokens may be traded in the secondary market at market price only while tangible assets and usufructs constitute the majority of the value of the pool.

WHAT HAPPENS NEXT

Nothing will bring this back to the board.

Look at this again

THE FACTS

Version 3

In force from 2026-04-02

Next review No review scheduled

What this means from day to day

The same six questions for every ruling, in the same order. Where nothing in the ruling answers one, it says so rather than leaving it blank.

Read by Gravitas Policy Registry

1. WHAT THE BOARD DECIDED

Where a tokenised pool combines asset categories, tokens may be traded in

ONE RULING

## The record

Everything the board has settled, newest first.

## The register

Everything the board rules on. Section 16.

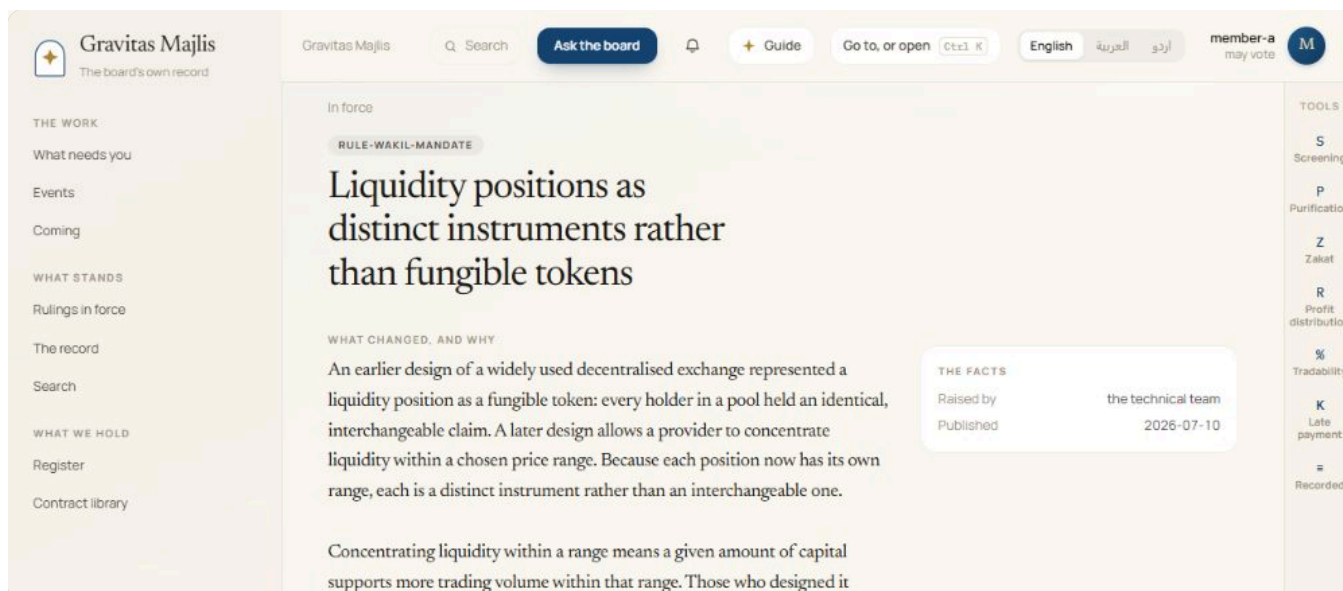

## The contract library

Nineteen contract types. Section 14.

## Notes from the technical team

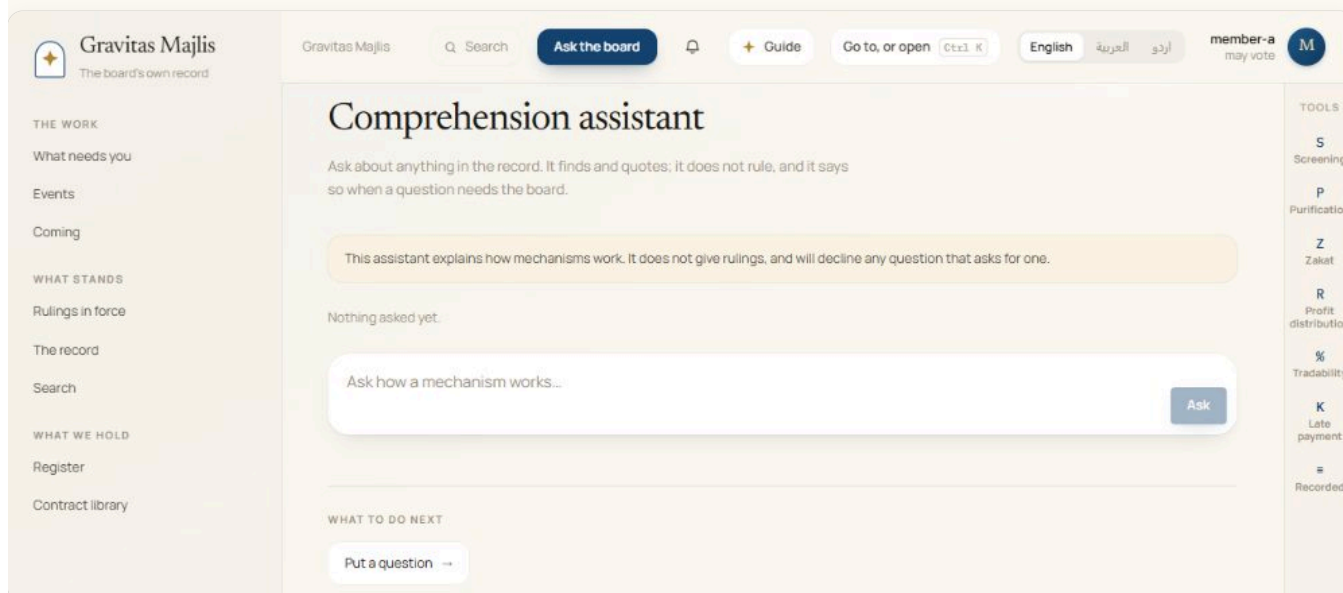

## NOTES

What was changed on the technical side and what it asks of the board. Each note carries the one thing outstanding, in the same corner as every other record.

ONE NOTE

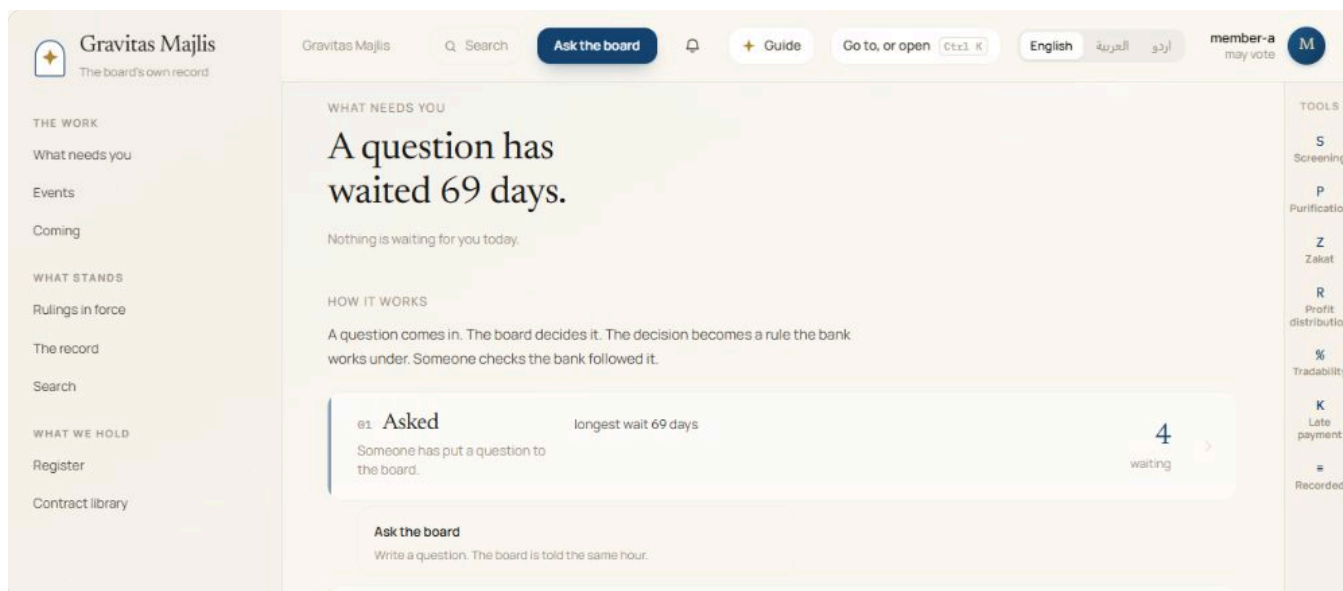

## The assistant

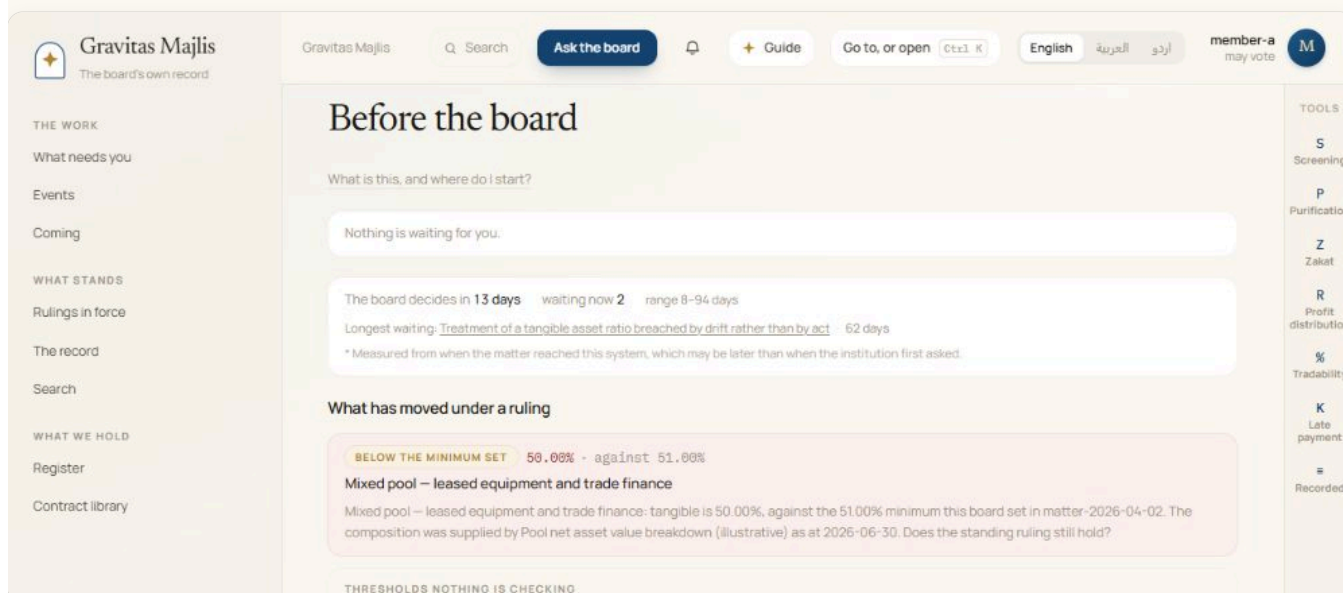

If the bank has connected one. It explains how a contract works. It does not say whether anything is permitted. The screen names the model and says that the question leaves the building. If no assistant is connected, the screen says so instead of showing a box that fails.

## The older screens

Nothing was deleted when the interface was simplified. The older list of matters, the older rulings page and the older home screen all still answer at their own addresses, so old bookmarks keep working.

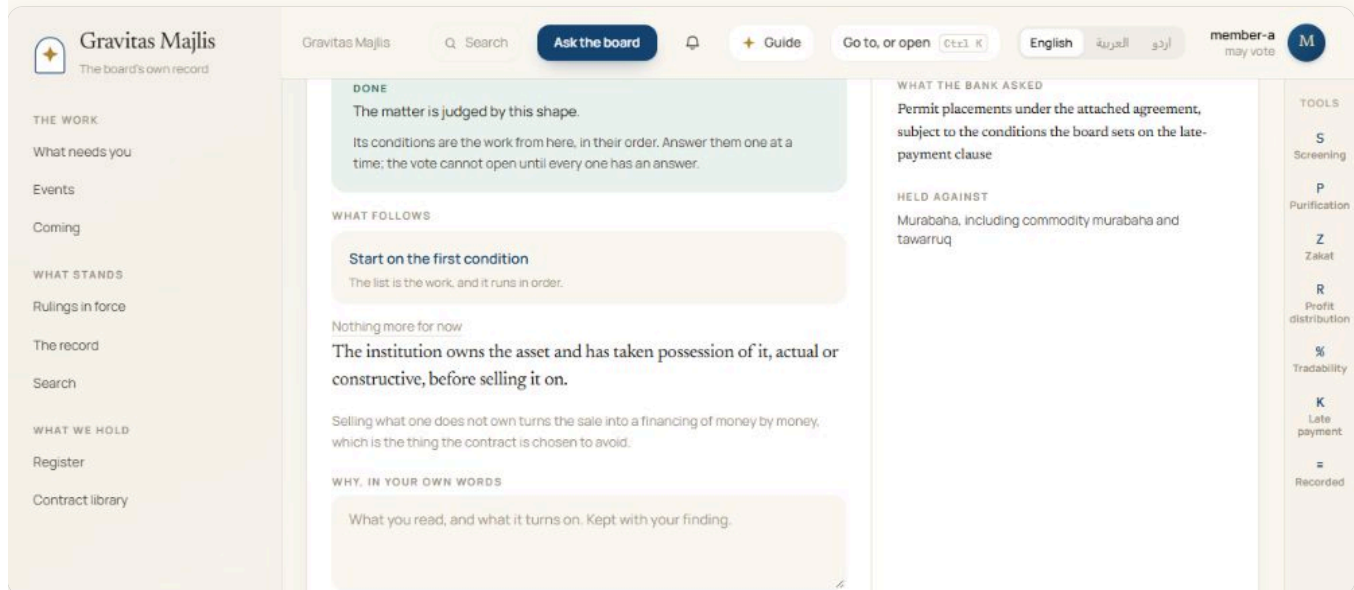

THE OLDER HOME SCREEN

THE OLDER LIST OF MATTERS

## 7 · Working through a question

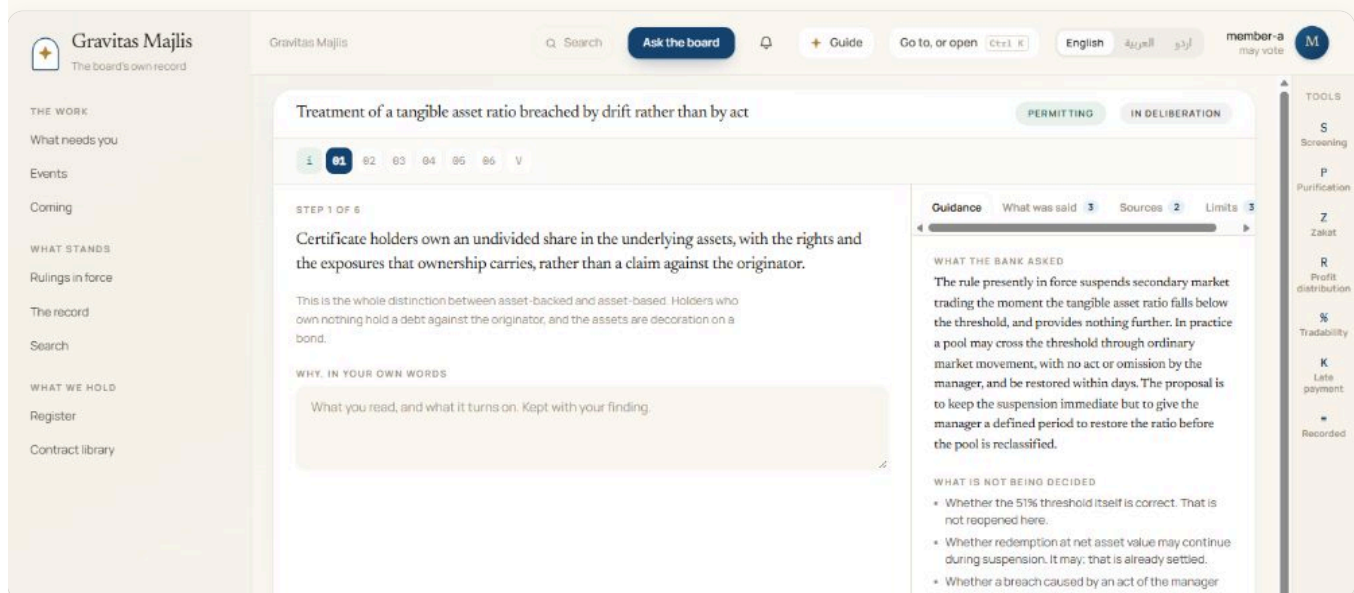

This is the main screen of the product.

### A MATTER

The strip along the top is the whole job: **i** the brief, **01-06** the conditions, **V** the vote. One step fills the middle of the screen. The panels sit on the right. The buttons are along the bottom and never move. Left and right arrow keys move between steps. The step is part of the web address, so you can send a colleague the exact step rather than the matter.

A matter as it first opens, before anyone has chosen a contract type:

### A MATTER, JUST OPENED

## The order of work

- 1. Open it for deliberation.** Until then only its author has to read it. From here it appears on every member's list.
- 2. Choose the contract type.** A question from the bank arrives without one, because nobody has decided yet what kind of contract it is. The screen says so and shows the library. Choosing a type loads its conditions as the steps.
- 3. Answer each condition.** Three buttons: **Met**, **Not met**, **Does not apply**. A reason is required; the button stays dead until you write one. *Not met* is also written into the contract clauses the bank gets back, with a line saying the agreement has to provide for it.
- 4. Argue it.** *What was said* is the discussion. You can name a colleague, which puts it on their list.
- 5. Vote.** The vote will not open until something has been said. Each position needs a reason. Where dictation is switched on, a member can speak the reason instead of typing it.
- 6. Close the vote.** What happens next follows from the count and from whether the ruling permits or restricts something.

## The panels on the right

**Guidance** – the question in the board's words and in the bank's, side by side.

The screenshot displays the Gravitas Majlis web application. The top navigation bar includes the logo, search, and user profile. The left sidebar lists various sections: 'THE WORK' (What needs you, Events, Coming), 'WHAT STANDS' (Rulings in force, The record, Search), and 'WHAT WE HOLD' (Register, Contract library). The main content area is titled 'Treatment of a tangible asset ratio breached by drift rather than by act' and is in 'IN DELIBERATION' status. It shows 'STEP 1 OF 6' with a description of certificate holders' rights. On the right, there are panels for 'Guidance', 'What was said', 'Sources', and 'Limits'. The 'Guidance' panel contains text about the bank's rule and a list of questions not being decided.

### GUIDANCE

**What was said** – the discussion, with replies, and a button to ask a named colleague.

Treatment of a tangible asset ratio breached by drift rather than by act

PERMITTING IN DELIBERATION

STEP 1 OF 6

Certificate holders own an undivided share in the underlying assets, with the rights and the exposures that ownership carries, rather than a claim against the originator.

This is the whole distinction between asset-backed and asset-based. Holders who own nothing hold a debt against the originator, and the assets are decoration on a bond.

WHY, IN YOUR OWN WORDS

What you read, and what it turns on. Kept with your finding.

Guidance What was said 3 Sources 2 Limits 3

member-a 2026-07-21

The immediate suspension is correct and should not be softened. My question is narrower: does a grace period of thirty days risk becoming an ordinary state, in which a manager operates at the boundary and relies on the period rather than treating it as an exception?

Reply

member-b 2026-07-22

A related point. If the ratio is restored on day twenty-nine and breached again on day thirty-two, does a fresh period begin? If so, does the suspension is not a

## SOURCES

**Limits** – what this decision will not decide. Without this a ruling gets read as wider than the board meant it.

## LIMITS

**What the committee found** – if the matter was sent to a committee first.

## Changing an answer

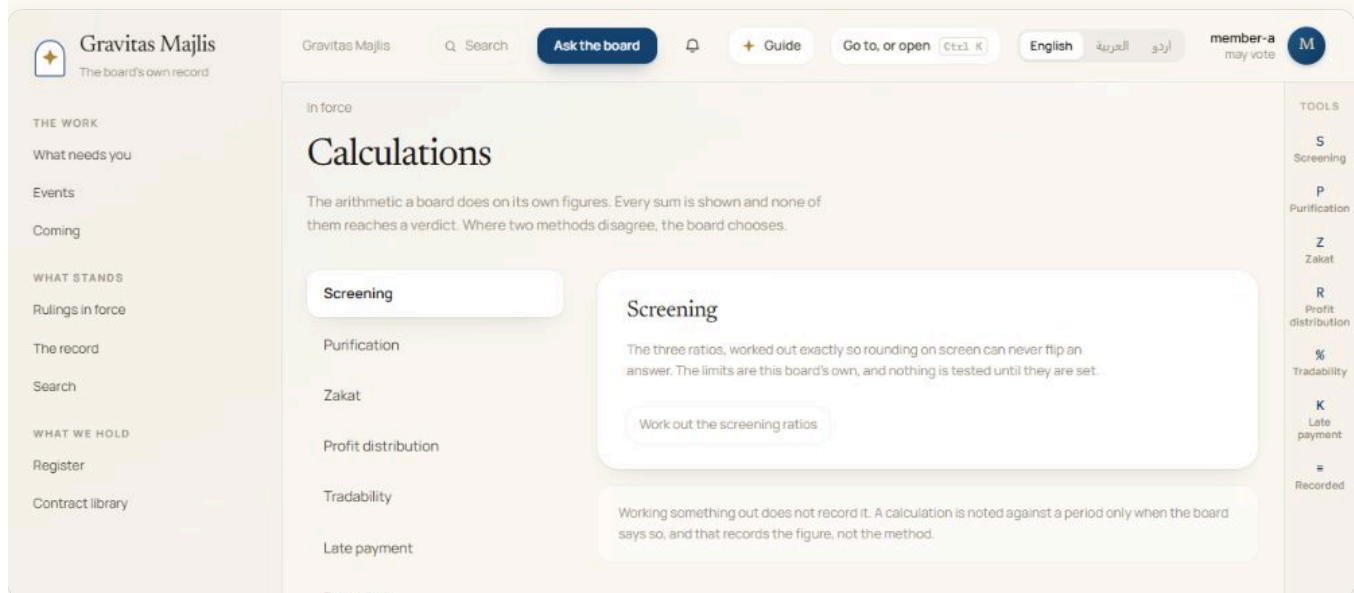

Record the same condition again with a different answer. The earlier one stays in the history, marked as superseded. Nothing is deleted.

## A decided matter

The same screen, with the work behind it: what was decided, the documents it produced, and – if the registry is connected – whether what is on the chain still matches.

## 8 · The tools

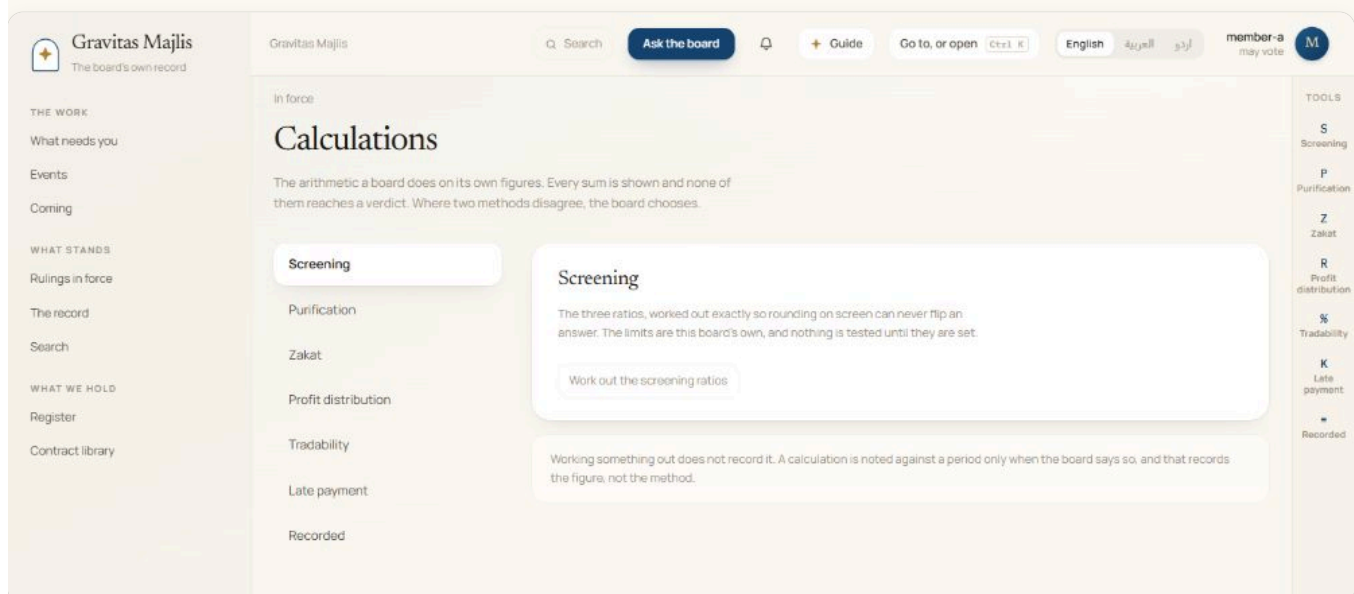

Seven buttons on every screen. Six of them are calculators.

### THE TOOLS

All six work the same way. You type the figures, they show the arithmetic, and they stop there. None of them says whether something is permitted; that is the board's answer, not the software's. The working is always shown, so anyone can check it or disagree with it. Money is handled as exact decimals throughout, never as rounded numbers.

### Screening

Three ratios, measured against the limits **the board sets**:

- interest-bearing debt,
- cash and interest-bearing securities,

- non-permissible income.

You also choose what to divide by – market capitalisation or total assets. Each ratio comes back with its top line, its bottom line, the limit it was compared against, and whether it is over.

## Purification

The screenshot shows the 'Calculations' page on the Gravitas Majlis platform. The page is titled 'Calculations' and includes a sub-header 'in force'. Below this, there is a description: 'The arithmetic a board does on its own figures. Every sum is shown and none of them reaches a verdict. Where two methods disagree, the board chooses.' A sidebar on the left lists various tools: Screening, Purification, Zakat, Profit distribution, Tradability, Late payment, and Recorded. The main content area is titled 'Purification' and contains a definition: 'What must be given away from a holding that passed screening. Not the purification that follows a breach – that one belongs to an incident and is recorded there.' Below this, there is a 'METHOD' section with three options: 'Per share' (selected), 'Per dividend', and 'Per unit'. Each option has a brief description of the calculation method.

What has to be given away from a holding that passed screening and still carries some non-permissible income.

There are three methods and they give different answers: per share, per dividend, per net asset value. You pick; the result says which was used.

This is not the same as purification after a breach. That one comes out of the bank's ledger and has a thirty-day clock on it. Section 15.

## Zakat

The screenshot shows the 'Calculations' page on the Gravitas Majlis platform, specifically the 'Zakat' section. The page is titled 'Calculations' and includes a sub-header 'in force'. Below this, there is a description: 'The arithmetic a board does on its own figures. Every sum is shown and none of them reaches a verdict. Where two methods disagree, the board chooses.' A sidebar on the left lists various tools: Screening, Purification, Zakat, Profit distribution, Tradability, Late payment, and Recorded. The main content area is titled 'Zakat' and contains a definition: 'The base, the rate and who bears it are three separate decisions, and this asks for all three before it computes anything.' Below this, there is a 'THE BASE' section with two options: 'Net assets' (selected) and 'Not invested funds'. Each option has a brief description of the calculation method. At the bottom, there is a 'THE YEAR' section with a brief description of the rate calculation.

Three choices, all of them the board's:

- **The base** – net assets, or net invested funds. On the same balance sheet these do not have to agree.
- **The year** – 2.5% for a lunar year, 2.577% for a solar one.
- **Who pays** – the bank, the shareholders, or both. The annual report asks for this.

What the investment account holders receive. Two reserves, at rates and caps the board approves, applied in a fixed order:

- **PER** comes out of gross profit, before the split, so the bank and the depositors both carry it.
- **IRR** comes out after the split, from the depositors' share only.

The order is shown because the annual report has to state whether the split followed what the board approved.

## Tradability

The screenshot shows the Gravitas Majlis web application. The header includes the logo, navigation links, a search bar, and a user profile. The main content area is titled 'Calculations' and contains a sidebar with various tools: Screening, Purification, Zakat, Profit distribution, **Tradability**, Late payment, and Recorded. The 'Tradability' tool is active, displaying a description of the tool and a section titled 'TAKE THE FIGURES FROM THE REGISTER'. This section contains two input fields: 'Mixed pool – leased equipment and trade finance' (4 parts, 2026-06-30) and 'Sukuk al-ijara, five year' (3 parts, 2026-06-30). Below these fields, there is a note about the underlying structure of the pool.

Whether a pool can be traded at market price or only at par depends on what sits behind the paper: tangible assets, debts, cash, receivables. The tool gives you the mix and the tangible ratio, and names which rules each proportion falls under. Where the line is drawn is the board's ruling.

## Late payment

The screenshot shows the Gravitas Majlis web application with the 'Late payment' tool selected. The sidebar on the left lists the same tools as the previous screenshot, with 'Late payment' now highlighted. The main content area displays the 'Late payment' tool's description and a section titled 'WHAT THE BOARD ESTABLISHED ABOUT THE DEBTOR'. This section contains two radio button options: 'Able to pay, and delayed' (selected) and 'Unable to pay'. The 'Able to pay, and delayed' option has a description stating that the board established that the debtor could have paid and did not.

What is charged when a debtor pays late, and where it goes. The charge goes to charity. The bank keeps only what it can show it actually spent on collection, and only if the board allows that at all. There is no field for turning the charge into income.

## What has been worked out

### WHAT HAS BEEN RECORDED

Every calculation the board has recorded, newest first, with its working, who recorded it, and under which ruling. Any member can record one. Any member can withdraw one, with a reason, in their own name.

Recording a figure is not approving it, and every record says so.

### Tools inside a step

When a condition needs a figure, Majlis opens the right tool inside that step and files the result against that condition. The panel tells you which of the two is happening, so nobody works out a figure and assumes it was saved.

### Figures out of the contract

If a draft has been attached, the reader offers the numbers it found, each with the passage it came from, so nobody retypes six figures off a balance sheet. A number of the wrong kind is shown but cannot be used: *1.5% per month* appears beside a money box with its quote, and will not go into it.

### ONE CALCULATION

Every recorded figure has its own address, so a notice mentioning an amount can point at the working instead of just stating a number.

## 9 • Counters and clocks

Nothing here is a stored list of reminders. Every count is worked out from the record at the moment you look, so it cannot go stale.

| COUNTER        | WHERE                    | WHAT IT SAYS                                                                           |
|----------------|--------------------------|----------------------------------------------------------------------------------------|
| What needs you | home screen and top bar  | how much is waiting <b>on you</b> , and how much of it is late                         |
| Days here      | every row in the queue   | how long this has been waiting                                                         |
| Pace           | the queue and the record | how long matters take, counted to the decision rather than to the effect               |
| The count      | the vote                 | for, against, abstained, the number required, and who has not voted yet, by name       |
| Quorum         | a sitting                | worked out from who attended                                                           |
| Waited         | a question from the bank | how long the bank has been waiting                                                     |
| The bell       | the top bar              | one number that goes up whenever the record changes                                    |
| Answered       | a matter                 | how many conditions have an answer, out of how many. No percentage and no progress bar |

## 10 · The calendar

The screenshot shows the 'What is coming' section of the Gravitas Majlis interface. The header includes the site logo, navigation links, a search bar, and a user profile. The main content area is titled 'What is coming' and explains that dates are determined from the record rather than kept as a list. It features three tabs: 'Sittings', 'What members undertook', and 'Reviews'. A key date is highlighted: 'Last held 2026-08-20' and 'Next due by 2027-02-20', with a note that the interval is counted as 6 months from the last meeting. A 'Convene a meeting' button is present. Below this, a section titled 'ALREADY PAST · 1' shows a 'RECTIFICATION PLAN DUE' for '2026-09-17'. The right sidebar lists various tools like Screening, Purification, Zakat, Profit distribution, Tradability, Late payment, and Recorded.

### COMING

Every date the board is held to, in order: sittings, review dates, ratification deadlines, and the dates attached to findings.

### Subscribing

This screenshot is similar to the one above but includes a subscription warning. A vertical bar on the right side of the main content area contains a warning icon and text: 'The screen warns you before you press: anyone who has that address can read the board's dates. It is shown once, Majlis keeps only a fingerprint of it, and you can revoke it in the same place.' The rest of the interface, including the 'What is coming' section and the right sidebar, remains the same.

You can subscribe to the board's dates from whatever calendar you already use. No email provider, no integration, no account — it is a web address your calendar reads.

The screen warns you before you press: anyone who has that address can read the board's dates. It is shown once, Majlis keeps only a fingerprint of it, and you can revoke it in the same place.

## 11 · What Majlis watches on its own

Four things go looking without being asked. All four report; none of them changes a ruling.

**Drift.** The board approves a pool that is 51% tangible. Months later it has rebalanced to 47%, and the ruling now describes something that no longer exists. Drift notices the difference and raises it. The status of the holding stays whatever the board made it.

**Review.** A review date is the only deadline in a board's work that nothing external pushes. Majlis compares the date to today and asks.

**Lapsed deadlines.** A restriction passed on a reduced quorum only stands if the full board ratifies it in time. Majlis marks it as lapsed when the window closes, instead of leaving a rule standing that nobody voted for.

**Examinations.** What was actually executed, compared with what the board approved.

The screenshot shows the Gravitas Majlis website interface. The header includes the logo, navigation links like 'Gravitas Majlis', 'Search', 'Ask the board', 'Guide', and language options. A sidebar on the left lists categories: 'THE WORK' (What needs you, Events, Coming), 'WHAT STANDS' (Rulings in force, The record, Search), and 'WHAT WE HOLD' (Register, Contract library). The main content area is titled 'Checked Examinations' and contains a paragraph explaining the purpose of examinations. Below this, a box titled 'EXAMINATIONS RECORDED' shows '3 EXCEPTIONS' for the period '2026-04-01 – 2026-06-30'. The specific examination is 'Secondary trading of a mixed pool at market price', with '78 examined of 412 (18.9%)'. A section 'HOW THE SAMPLE WAS CHOSEN' states: 'Every secondary transfer in the quarter above AED 1,000,000, and twenty below it'. A right sidebar lists 'TOOLS' with icons for Screening, Purification, Zakat, Profit distribution, Tradability, Late payment, and Recorded.

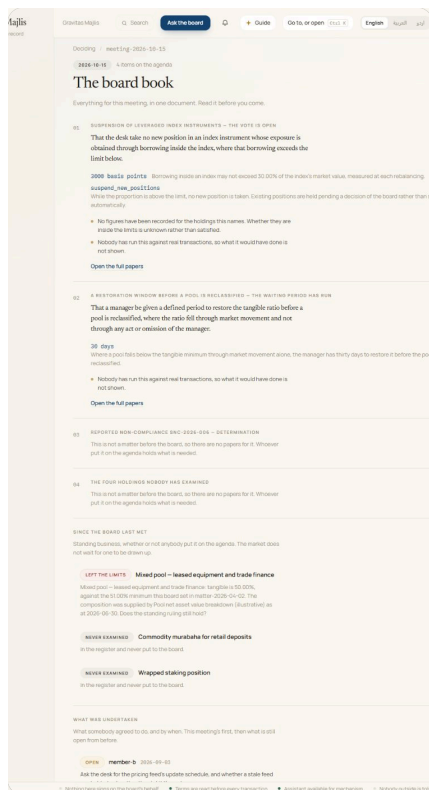

### EXAMINATIONS

The screen lists the differences. There is no score and no pass mark; the conclusion is the board's.

## 12 · The documents

Everything below opens, prints, and is built from the record rather than typed by hand.

| DOCUMENT              | WHAT IS IN IT                                                                                                                                                 | WHO CAN READ IT                    |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| The ruling            | the question, every condition and its answer, who answered and why, the votes, the limits, and – while it is in its waiting period – the date it takes effect | the board, and the bank that asked |
| The contract clauses  | a draft agreement built from what the board decided, with a clause for every condition marked <i>not met</i>                                                  | the board and the bank             |
| The board book        | everything for one sitting, in one document                                                                                                                   | the board                          |
| The compliance manual | every approved product and the conditions on it                                                                                                               | the board and the bank             |
| The annual report     | the board's report to shareholders                                                                                                                            | the board                          |
| The audit export      | what was permitted on a given date, who approved it, on what reasoning, with any dissent                                                                      | the board                          |
| The matter pack       | one matter with everything needed to decide it                                                                                                                | the board                          |
| The dossier           | everything the board ever decided about one holding                                                                                                           | the board                          |
| Disclosure            | what the bank still owes and still has to do                                                                                                                  | the bank                           |

## THE BOARD BOOK

A ruling gets its reference number when it comes into force, not when the question arrives. Most questions never become rulings, and numbering them all would leave gaps that look like missing decisions.

## 13 · Reading a contract

The screenshot shows the 'Check a contract' page in the Gravitas Majlis application. The interface is divided into a left sidebar, a main content area, and a right sidebar. The left sidebar contains navigation links under three categories: 'THE WORK' (What needs you, Events, Coming), 'WHAT STANDS' (Rulings in force, The record, Search), and 'WHAT WE HOLD' (Register, Contract library). The main content area has a header 'In force' and a title 'Check a contract'. Below the title, there are instructions for pasting a draft and a draft. A section titled 'WHERE THE CONTRACT COMES FROM' contains two buttons: 'A file from this computer' and 'Our draft: Secondary trading of a ...'. Below these buttons, there is a note: 'A file is read here in your browser and never sent anywhere. Or paste the text below.' At the bottom of the main content area, there is a text input field with the placeholder 'Paste the text of the contract here.' The right sidebar contains a 'TOOLS' section with a list of items: S Screening, P Purification, Z Zakat, R Profit distribution, % Tradability, K Late payment, and = Recorded.

### CHECKING A DRAFT

Attach or paste a draft and Majlis goes through it condition by condition. For each one it reports one of three things:

- **found** — the draft deals with this, and here is the passage;
- **unclear** — something was found but it cannot be relied on;
- **absent** — nothing in the draft deals with it.

*Found* means the agreement addresses the condition. Whether it does so well enough is the board's decision.

There are two readers. The plain one works on the words alone: no model, no key, no network. The other uses a language model, where the bank has configured one; it pulls out passages and quotes them, and a quote that cannot be matched back to the text is downgraded to *unclear*. Which one ran is written on the reading.

## The library this board holds

Nineteen contract shapes ship as a draft, binding on nobody. Adopting one says: when we judge an arrangement of this kind, these are the conditions we judge it against.

CHECK A CONTRACT

Paste a draft. It shows where each condition is answered and where it is not, and quotes the sentence. It does not say whether the contract is permissible — that is the board's ruling.

Paste the contract. You get back where each condition is answered in the text and where it is not, with the sentence. Nothing is kept.

## READING A DRAFT AGAINST A TYPE

### They arrive as drafts

Until the board does something with a contract type, its conditions are a starting point and bind nobody. Every screen that shows them says so.

The board can adopt one as it stands, change its conditions, decline it with a reason, or simply rule on a matter against it without adopting anything. The checklist always says which of those is the case.

### COMPARING TYPES

Pick from the list, or press **compare them all** and Majlis reads the draft against every type and ranks them. Pressing a ranked row only fills in the list; it does not choose for you.

# 15 · Breaches, undertakings, committees, sittings

## A reported breach

The screenshot shows the Gravitas Majlis dashboard. The header includes the logo, search bar, 'Ask the board' button, and user profile 'member-a may vote'. The left sidebar lists navigation options: 'THE WORK' (What needs you, Events, Coming), 'WHAT STANDS' (Rulings in force, The record, Search), and 'WHAT WE HOLD' (Register, Contract library). The main content area is titled 'Reported non-compliance' and includes a 'Report an event' button. Below this, three event cards are displayed: 1. 'AWAITING THE DIRECTORS' (38 days here) with a value of 41280.00 AED owed. 2. 'AWAITING DETERMINATION' (15 days here) with a value of 41280.00 AED owed. 3. 'AWAITING THE DIRECTORS' (19 days here) with a value of 41280.00 AED owed. The right sidebar lists 'TOOLS' including Screening, Purification, Zakat, Profit distribution, Tradability, and Late payment.

## EVENTS

Nine steps, in order: reported, stopped, determined, the bank's account of it, the plan, endorsed or sent back, what was delivered, purification and what was paid, closed. Each step has its own button, its own clock and its own record of who did it.

The screenshot shows the Gravitas Majlis dashboard with the 'Reported non-compliance' event selected. The event details include: 1. 'Reported' (38 days here) with a value of 41280.00 AED owed. 2. 'AWAITING DETERMINATION' (15 days here) with a value of 41280.00 AED owed. 3. 'AWAITING THE DIRECTORS' (19 days here) with a value of 41280.00 AED owed. The event is titled 'Profit paid on a deposit before the underlying sale settled'. The event description states: 'Retail term deposits maturing between 3 and 11 August were credited with their profit share on the maturity date. For 2% then the underlying commodity sale had not completed at that point, it completed between one and four days later. The amounts were correct, what was early was the settlement, not the arithmetic.' The event is categorized as 'Reported' and 'AWAITING THE DIRECTORS'. The event is titled 'Profit paid on a deposit before the underlying sale settled'. The event description states: 'Retail term deposits maturing between 3 and 11 August were credited with their profit share on the maturity date. For 2% then the underlying commodity sale had not completed at that point, it completed between one and four days later. The amounts were correct, what was early was the settlement, not the arithmetic.' The event is categorized as 'Reported' and 'AWAITING THE DIRECTORS'. The event is titled 'Profit paid on a deposit before the underlying sale settled'. The event description states: 'Retail term deposits maturing between 3 and 11 August were credited with their profit share on the maturity date. For 2% then the underlying commodity sale had not completed at that point, it completed between one and four days later. The amounts were correct, what was early was the settlement, not the arithmetic.' The event is categorized as 'Reported' and 'AWAITING THE DIRECTORS'.

NEVER EXAMINED

### Commodity murabaha for retail deposits

In the register and never put to the board.

HOW THIS IS HELD

Held conventionally nothing says otherwise

A ruling over this is carried out by people in the bank's own process, checked at review on a sample, and a breach is found at the next review.

Mark it as held as a token

WHAT HAPPENS NEXT

Put it to the board, so it is ruled on rather than assumed.

Put this to the board

### ONE HOLDING

Open one and you get everything the board ever decided about it.

One thing to watch, and the screen says it too: if the same instrument is entered twice, it stays two entries. There is no way to merge them, so it will be counted twice in every total drawn from the register. Check before entering.

## 17 · Search

The screenshot shows the Gravitas Majlis search interface. The header includes the logo, navigation links, and a search bar. The main content area is titled "Search the record" and contains a search bar with the placeholder text "A word, a standard, a member, a phrase from a reason". Below the search bar are filters for "NARROW IT" (Any status, Either direction, Only what I took part in) and a "WHAT TO DO NEXT" section with a link to "What stands". The right sidebar lists various tools and categories.

### SEARCH

A board that has decided two hundred matters and cannot find the one from March has a filing cabinet, not a record. Search covers every stage at once, so you do not have to know which stage a ruling is in before you look for it.

The screenshot shows the Gravitas Majlis search interface with search results for the term "tangible". The search bar contains the word "tangible". Below the search bar are filters for "NARROW IT" (Any status, Either direction, Only what I took part in). The results section shows "3 matters" and a list of results. The first result is "Treatment of a tangible asset ratio breached by drift rather than by act" with a status of "PERMITTING" and a date of "2026-07-21". The right sidebar lists various tools and categories.

### Demonstration Board (illustrative data only)

Who is on this board, and how it decides.

▼ You, as you appear on a ruling

Name Title

Board Member A Shariah Board Member (placeholder)

Email Telephone

Your name and title are printed on every ruling you sign. Changing them here changes how you appear from now on; a ruling already signed keeps the name it was signed under.

### SETTINGS

- **The board** — who is on it, how it decides, and every time that changed.
- **Your details and password** — changed by you, from whatever device you have.
- **Your devices** — you can register a passkey and sign with it. This needs a secure connection; where there is not one, the screen says so rather than offering a button that fails.
- **Your calendar feed** — issued and revoked here. Section 10.

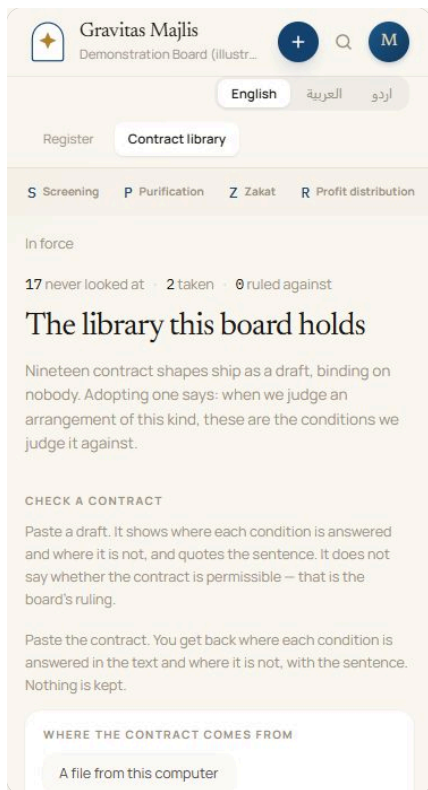

## 19 • Phone and tablet

A phone shows less at once than a desk does. It does not show less in total: everything reachable at full width is reachable on a phone.

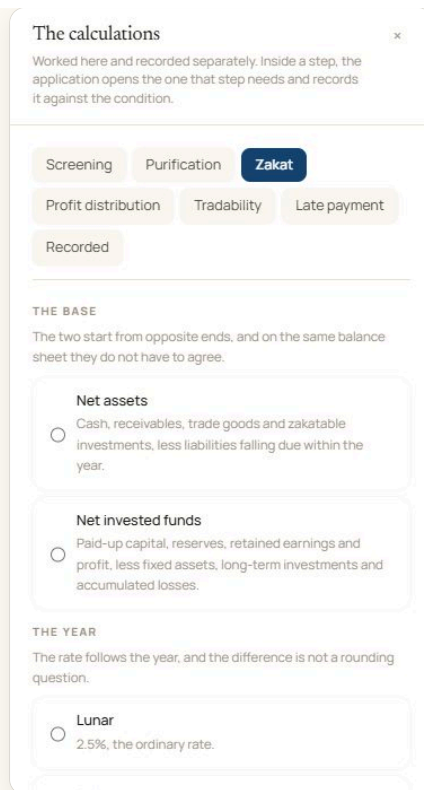

ON A PHONE

- The bar at the bottom carries one place from each of the three groups.
- Under the title, the rest of the group you are in, scrolling sideways.
- The seven tools are a strip across the top.
- **Ask the board** is the round button in the top bar.
- The four facts about the installation are at the foot of the page.

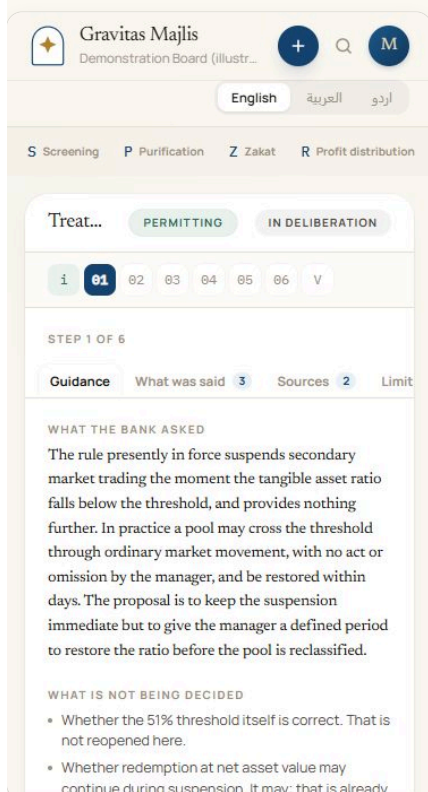

THE LIBRARY ON A PHONE

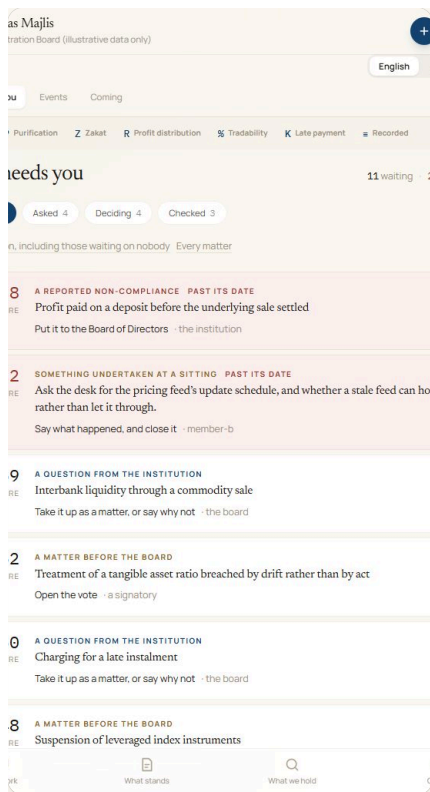

A TOOL ON A PHONE

A matter works the same way, narrower.

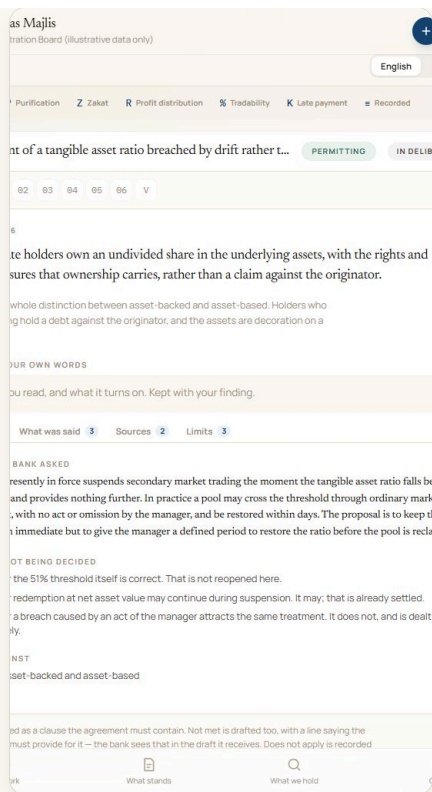

A MATTER ON A PHONE

A tablet has room for the tools across the top and the whole group under the title.

ON A TABLET

A MATTER ON A TABLET

Arabic and Urdu are the same application, mirrored.

## 20 · What Majlis does not do

Stated here in one place, and stated again on the screen where it matters.

- **It does not decide anything.** No calculator returns a verdict. No reader says a contract is compliant. The assistant explains mechanics, not permissibility.
- **It does not pick a standard for you.** Which standard governs is the board's decision, written in the board's own words.
- **Nothing becomes binding by admin.** Changing what a board holds needs a ruling, not a setting.
- **It does not sign for the board.** A password identifies; it does not attest.
- **It does not stop a transaction** unless the registry is connected, and the bottom bar says which.
- **It tells nobody outside** unless email is connected. A notice is written and shown on screen; whether it was actually sent is stated, never assumed.
- **It does not host the meeting.**

## 21 · Every address
